

Since Youtube removed the sort by oldest feature, I decided to make my very own, makeshift sort by oldest button

1. To run this code you'd need the scrapetube module, you can install that by the command:

```
C:\Users\User1> pip install scrapetube
```

2. Go to the homepage/ videos page of the channel your'e trying to sort by oldest and copy the channel url as shown:
3. Say if the link to the videos page is: <https://www.youtube.com/@YouTube/videos>, we're looking for <https://www.youtube.com/@YouTube>

4. Run the code, and paste this url.
5. It might take some time depending on how many videos the channel has, but you should get a list of links of all the videos on that channel in an old -> new order.
